

Dow Jones Industrial Average (DJI)

Time Frame: 30 minutes

Today's Description

With red arrows is presented our prediction for today!

Now we already are under our significant resistance from 10,000... Under it we can consider short trades with first target at 9,910, second target at 9,850 and maybe even 9,720.

Above 10,000 it begins the "indecision zone" until 10,090... here DOW can't decide where it should go so do not trade here... reverse only if breaks above it....

Dow Jones Industrial Average (DJI)

Time Frame: DAY

Today's Description

With red arrows is presented our prediction for next days!

(Feedback: We saw some fluctuations between 10.000 and 10.180 exactly like we expected!)

For the next three days expect to see some mixed evolutions from US stock markets... If Monday some upward moves can appear and move the DOW to 10.180 and more, during next days the downward moves should resume again and move the index under 10.000...
