Time Frame: 30 minutes

Today's Description

With red arrows is presented our prediction for today!

For today's live session we have little short signals in the first part of the session and long signals in the second part of it... So, expect to see some movements under 10.270 in the first hours followed by upward moves possible to our next resistance from 10.370... A significant resistance after that is 10.500. Consider short moves only if Dow manages to break 10.180.
