## Our prediction:

## What really happened:

### Our comments

After a decline to our support (so SHORT for 50 points profit) we saw a little recovery back near our resistance from 10.270 (so again a possible LONG for 40-50 points profit)... Until now everything was perfect and in concordance with our forecast... But suddenly in the last two hours the trend changed again and DOW sink 100 points under our support... (a good opportunity to sell when broke 10.180, like we said!)
