

Dow Jones Industrial Average (DJI)

Time Frame: 30 minutes

Today's Description

With red arrows is presented our prediction for today!

Even after such a strong move, from our point of view Dow has a strong resistance at 10.670. Under this level more downward moves can develop. Only above it you should reconsider your positions and look for some quick long trades for 1-200 points profit. The big picture is still negative, even if during live session Dow could try to touch and break our resistance. During second part and especially after the week-end the bear sentiment can comeback!

Even from Friday we forecasted downward moves for DOW...They appeared and manifest even stronger that we expected!

During the next days the sentiment is still strong negative. Even if Dow will try to recoup some of the fall, we expect that it will not succeed and more downward moves would manifest in the markets. Strong reversal levels are at 10.670 and 10.950.
