What really happened:

Our comments

When Dow broke resistance at 7770 – 7780 it was for a long trade. It didn't went to much so you could close the trade with -50 pips loss. Then our prediction for a short day occurred so SHORT from 7750 to 7650. At 7650 Dow broke support so SHORT AGAIN. +100 pips profit again because Dow managed to arrive at 7550. This live signals we provide only for our subscribers for intraday updates. But you could manage very well only with our daily analysis for DOW!
